

Patryk Kukla

Research Assistant

Warsaw, Poland

Profile

My life experiences taught me that my main focus was always trying to understand things. Therefore after graduating from business university and standing at the crossroads – I decided to start a degree in psychology, which was always my field of interest. The first study year made me realise that right now, the best way to combine my work experience and passion for psychology, data science and looking for insights is through working as a scientist.

Experience

Lab Manager & Research Assistant – SWPS University
